JUN 25 2007

Mr. Brian A. Blakely

Dear Mr. Blakely:

On February 6, 2004 you wrote to the Firearms Technology Branch (FTB) of the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) inquiring about the legality of a small section of string intended for use as a means for increasing the cycling rate of a semiautomatic rifle. We responded on September 30, 2004. In that letter we stated:

In 1996, FTB examined and classified a 14-inch long shoestring with a loop at each end. The string was attached to the cocking handle of a semiautomatic rifle and was looped around the trigger and attached to the shooter's finger. The device caused the weapon to fire repeatedly until finger pressure was released from the string. Because this item was designed and intended to convert a semiautomatic rifle into a machinegun, FTB determined that it was a **machinegun** as defined in 26 U.S.C. 5845(b). (Emphasis in original).

Upon further review, we have determined that the string by itself is not a machinegun, whether or not there are loops tied on the ends. However, when the string is added to a semiautomatic firearm as you proposed in order to increase the cycling rate of that rifle, the result is a firearm that fires automatically and consequently would be classified as a machinegun. To the extent that prior ATF classification letters are inconsistent with this letter, they are hereby overruled.

We hope that this clarifies our position. Should you have any questions, please do not hesitate to contact us.

Sincerely,

Richard Vasquez
Acting Chief, Firearms Technology Branch
